Autodesk DWG Exchange Format (DXF) Many CAD systems including AutoCAD support the exchange of drawings through the drawing exchange format, also known as the DWG (drawing) exchange format. The exchange format is a file format that allows for the transfer of drawings between different applications. It supports the transfer of geometric information such as points, curves and polygons. The most common type of file exchange format for CAD systems is the DWG format. This is a vector drawing exchange format that includes two file formats, the AutoCAD 2002 format and the AutoCAD 2009 format. In some cases an authoring application and an exchange application will use the same format. DWG formats are available for CAD applications from many different software vendors, and these file formats usually support interoperability. Drawing exchange formats support more than just geometric data. Non-geometric data types such as text, color values and linetypes can be saved in exchange formats. Text and colors are usually saved in Portable Network Graphics (PNG), while linetypes are usually stored in binary bitmap or Adobe PDF format. Linetypes, such as line colors or color-filled polylines, can be thought of as a container for the actual graphic objects, like lines and curves. The software maintains and manages the objects themselves, as well as the relationships among them. A drawing exchange format can be used to read and write a drawing. Any changes made to a drawing after it has been saved are updated in all files. For example, if you create a new line in a DWG file, this is updated in the XML format. Autodesk Exchange formats AutoCAD (2007+) The DWG format is found in AutoCAD since at least AutoCAD 2002 (October 2002). Most other Autodesk applications use the DWG file format. Prior to AutoCAD 2002, the older drawing exchange format, called DWF, was used. This was replaced in AutoCAD 2002. Later versions of AutoCAD use the AutoCAD 2009 format, which is based on the earlier 2010 DWG format, with support for high-quality printing. AutoCAD 2009 The DWG (AutoCAD 2009) file format has four different parts: The DGN part (AutoCAD 2009) stores a collection of geometric objects such as points, curves and planes. A line is represented by a vector, a polyline ca3bfb1094

### What's New in the AutoCAD?

Non-geometric entities like splines, polylines and spline nodes can now be created as paths and automatically become editable geometry objects. This lets you edit your paths without having to use the Select tool. Create and manage your own symbol libraries. A symbol library is a set of symbols, each with a title, color, and associated symbol link. Use symbols for labeling your drawings, logos, components, etc. Use symbol collections for creating standard symbols. (video: 1:45 min.) Symbol font sizes, styles, and color settings can now be saved in the drawing and imported back at a later date. The symbol editor also provides an overview of font settings for drawing symbols. (video: 1:35 min.) Styles: Styles can be used for simple graphic layouts and can contain properties for various formatting and text styles. Styles can be shared and reused. (video: 3:10 min.) The new Static Text and Dynamic Text commands allow you to easily insert or update text that does not move. These commands work with your cursor to automatically move text based on your drawings. (video: 1:25 min.) The Legend command lets you create lists of objects, lines, and polylines that can be quickly identified in the legend. The legend also includes a preview of the object's properties. (video: 1:10 min.) The ability to include your company logo on your drawings has improved. (video: 1:35 min.) UI: Icon symbols can now be displayed on the drawing canvas and can be changed to different shapes at any time. (video: 1:20 min.) The Tools - Common commands provide the ability to set parameters for drawing commands and to customize some of the drawing commands available to you. These include creating customization lists, applying to groups of drawings, and automatically exporting the customization settings to other drawings. (video: 1:20 min.) The 2D and 3D drop lists and menu are now configurable and the list options can be changed from the menu. You can also edit the lists and move items between lists. (video: 1:15 min.)
